Dave,

You're welcome on the call this morning and based on the technical evaluation that I received from the source selection team prior to award, AET is in the ECHO database as a Facility without any violations, has a valid Transporter ID and met all the requirements. Based on my current workload, I don't anticipate being able to provide any further responses until after 1 Oct 18.

Thanks again for your interest in this requirement.

Billy

Mr. Sahli

I appreciate you calling me with regards to the referenced award. However the one thing I forgot to ask you about was a clause in the Statement of Work (SOW) dealing with the bid not being able to be awarded to brokers as indicated below:

B. REQUIREMENTS – The Contractor shall abide by all requirements outlined in this Statement of Work.

1. Qualification

- i. The contractor must be an established and recognized provider of the same or similar services with adequate capacity and personnel to perform the work and must have a satisfactory record of performance.
- ii. A contractor who is merely a broker of such services does not qualify for this contract.

When I look at Source Environmental Inc they are not listed on the ECHO database. Therefore they cannot be a TSDF or even a transporter. The only other option is that they are a "broker".

Their parent company AET Environmental is not a TSDF either. They are simply a transporter and therefore at best a broker.

Please explain how Source Environmental Inc was awarded this bid based upon your requirements indicated in Section B of the SOW.

Thank you

David Streng
